

ITEM: 21

SUBJECT: Rescinding Various Waste Discharge Requirements

REPORT: Following is a proposed order rescinding 7 sets of waste discharge requirements that are no longer needed.

RECOMMENDATION: Adopt the proposed Order.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL VALLEY REGION

ORDER NO. R5-2006-

RESCINDING VARIOUS WASTE DISCHARGE REQUIREMENTS

The California Regional Water Quality Control Board, Central Valley Region, finds that the Board adopted the following Orders, which are no longer applicable for the reasons shown:

Order No. 94-139, adopted 20 May 1994, prescribes requirements for Oilseeds International, Ltd.'s discharge of food oil processing wastewater. The facility is at 8085 Highway 45 in Grimes, Colusa County. Operation of the oil processing facility ceased in 2005 and therefore the Waste Discharge Requirements are no longer needed. The Discharger has requested a rescission of the WDRs. (ALO)

~~Order No. 94-363, adopted 9 December 2004, prescribes requirements for Biosolids Recycling, Inc., Joseph and Connie Jess, and Paul and Sally Marciel, Jess Ranch and Marciel Ranch Biosolids Application Sites. Jess Ranch (450 acres) is at 15850 Jess Ranch Road in eastern Alameda County, and Marciel Ranch (470 acres), is adjacent to the west side of Jess Ranch site. The existing WDRs are not protective of surface and groundwater quality, and the Dischargers have requested to be covered under the Biosolids General Order (Order No. 2000-10 DWQ) rather than under revised WDRs. Therefore the WDRs are being rescinded. (ALO)~~ This item has been removed from the March 2006 agenda.

Order No. 96-014, adopted on 26 January 1996, prescribes requirements for a Class II Waste Piles unit known as the Soil Bioremediation Facility for the United States Air Force, Beale Air Force Base. The facility was designed to treat soil contaminated with petroleum hydrocarbons that was generated during the removal of nearly 1000 Underground Storage Tanks at Beale Air Force Base. Closure of the Soil Bioremediation Facility occurred in November 2001 and included removal of all remaining treated soil that was stockpiled at this site. Uncontaminated berm material from the Soil Bioremediation Facility was spread uniformly across the site to conform to the existing grade, and to direct runoff away from the Soil Bioremediation Facility. All other infrastructure associated with the Soil Bioremediation Facility was either removed or closed in place. Clean closure of the Soil Treatment Cell was completed in compliance with the Order. Therefore, Order No. 96-014 should be rescinded. (RRR)

Order No. 98-071, adopted on 17 April 1998, prescribes requirements for Susan Lawing dba Homegrown Enterprises to discharge olive oil process wastewater to a shallow pond. No wastewater has been discharged since 10 January 2003. Operation of the olive oil processing facility has ceased. The Discharger has requested rescission of the waste discharge requirements. (SSG)

Order No. 98-224 (Order) was adopted on 11 December 1998, for Sierra Cedar Products and Rosboro Lumber Company for the permitted discharge to, and ponding of irrigation water for Sierra Cedar's log storage facility at 6124 Avondale Ave, Marysville in Yuba County. The Order prescribes requirements for the discharge of the irrigation water to surface ponds, as part of the operation of the log storage facility. Sierra Cedar has discontinued operating the log storage facility at this location. The real property has been sold, and the discharger has ceased the discharge and has requested rescission of the Order. (MES)

~~Order No. 5-00-211 (NPDES No. CA 0084611) prescribes requirements for the discharge of tertiary treated wastewater for the California Department of Corrections, Sierra Conservation Center in Tuolumne County. This Order provided interim wastewater disposal relief while the permanent land storage and disposal facilities were being constructed. Discharge was to Woods Creek, near Jamestown. The Order expired on June 1, 2005 and a complete application for renewal of the permit was not submitted. Therefore, expired Order Number 5-00-221 should be rescinded. (ARM)~~ This item has been removed from the March 2006 agenda.

Order No. 5-01-080, adopted 27 April 2001, prescribes requirements for the discharge of settled water treatment plant backwash from the Lake Davis Water Treatment Plant to Big Grizzly Creek by the Plumas County Flood Control and Water Conservation District. The plant has not operated since its source of water, Lake Davis, was treated with rotenone in 1997. Although the plant may be reactivated in the future, millions of dollars of plant upgrades must first be accomplished, and a specific future start-up time, if any, is unknown. The Discharger has therefore requested rescission of their requirements. The Discharger will submit a new report of waste discharge prior to discharge from the upgraded plant. (RSD)

IT IS HEREBY ORDERED that the above waste discharge requirements Orders are rescinded.

I, PAMELA C. CREEDON, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of an Order adopted by the California Regional Water Quality Control Board, Central Valley Region, on 17 March 2006.

PAMELA C. CREEDON
